

RecoverLogin

Overview

Locker for passwords!

It keep your login credentials two times encrypted using very strong algorithms. Neither anybody nor we can read your passwords.

Project Execution:

This stage involves performing work/activities defined in the project management plan to satisfy project specifications; coordinating people and resources.

1) **Requirements Solicitation:** In this phase, we try to understand requirements of a system or requirement gathering from customers, users, and stakeholders by conducting meetings, interviews, brainstorming sessions, questionnaires, prototyping etc.

2) **Analysis & Design:** Now in analysis & Design phase we analyse the requirements. After the analysis we design a description of a database schema and software objects.

3) **Developing:** After Analysis & Design phase, We start development according to the client requirements with our dedicated development team.

4) **Testing:** After the development of particular module, we handover the module to testers for proper testing.

5) **Deployment:** In final phase we deploy the code in Heroku for live testing and after that we deploy it on production server.

Feature:

- 1) Two time encryption of credential using very strong algorithm.
- 2) Only user can decrypt their own credentials.
- 3) Functionality to add strong master key so you can access the cloud. User can change the key.
